Intelligent and ecological: BRISTA Planting Baskets

A smart and affordable alternative to concrete are our planting baskets. They are made of galvanized expanded metal and impress with their ecological and economic character. A different kind of slope stabilization offers some additional benefits:

- no foundations or drainage required
- light weight
- easy handling when filling and while irrigating and draining
- good cohesion of the individual elements, through e.g. cable ties
- easy planting
- No overheating of the root system in bright sunlight
- ecological root corset for slopes, embankments and hillsides

If requested we could deliver our planting baskets sendzimir galvanized and powder coated in RAL color 6005 (moss green).

Exclusive retail through Manufactum: www.manufactum.de

Part #	Description	Length (mm)	Width (mm)	Surface
001126	planting basket "ÖKO-WALL"	380	300	sendzimir galvanized
