BRISTA ArtPunch: decorative and unique

BRISTA ArtPunch - embossed art that adapts to your interior thanks to individual design options. These unique artwork is also suitable as a great gift idea.

Your template

Please send us your pictures and files by mail or e-mail. To get an absolutely sharp and contrasty picture we will edit your templates if necessary.

Seperation into individual pixels and punching in the metal sheet

After the potential editing the photos are separated into their individual pixels with the help of a special software. Afterwards each pixel is assigned to a punching stroke with the matching tool. Then we forward the created program to a revolver punching machine, which now performs the individual punchings in the sheet metal. Possible materials are steel, copper, brass or aluminum.

All images are punched into a metal sheet of 1mm thickness with up to eight round dies. The smallest punch has a diameter of 1.0 mm, the biggest is 3.1 mm. The steps inbetween the punches are 0.3 mm to the next larger punch. Depending on the template the images can be produced in the desired size.

High contrast background provides desired effects

To achieve the desired effect of the picture, we recommend to combine it with a high-contrasty background.

We can either offer you coatings in different colors for your image or the classic version with clear coating only.

We are happy to explain further possibilities (e.g. framing, plexiglas cover, etc.) to you on request.

We can either offer different colors for your image or go classic with clear coating only.
